

AMENDMENTS TO THE CLAIMS

The following Listing of Claims, with amendments to independent claims 1, 23 and 29, and dependent claim 2, will replace all prior versions, and listings, of claims in the application.
No new matter is introduced as a result of the following claim amendments.

Listing of Claims:

Claim 1 (Currently Amended). A computer-readable medium having a computer implemented process for providing automatically generated completion information from entries in a dynamic list via a user interface, comprising using a computer to perform the following acts:

dynamically tracking a data store of items comprising ~~one or more of previously sent email and previously received email, and further comprising~~ a plurality of electronic documents including one or more of word processor files, spreadsheet files, and presentation files;

analyzing and extracting contact information from the contents of items within the data store;

adding the contact information to the dynamic list;

dynamically generating suggested entries from the contact information and related to user entry data; and

providing the suggested entries in the dynamic list via the user interface in real time as the user enters the data.

Claim 2 (Currently Amended). The computer-implemented process of claim 1 wherein the data store further includes:

at least one of previously sent and received email;

email addresses and contacts that exist within previous systems;

email stores located on at least one of local and public servers;

current and previous contact databases; and

data embedded within other electronic application files.

Claim 3 (Original). The computer-implemented process of claim 1 wherein providing automatically generated completion information comprises providing a most probable match from the list to a portion of the user entry data.

Claim 4 (Original). The computer-implemented process of claim 1 wherein dynamically tracking a data store comprises scanning electronic files of at least one of particular types and in specific locations to locate contact information within the files.

Claim 5 (Original). The computer-implemented process of claim 4 wherein electronic files are scanned as they enter the data store.

Claim 6 (Original). The computer-implemented process of claim 4 wherein particular electronic files within the data store are excluded from scanning.

Claim 7 (Original). The computer-implemented process of claim 4 wherein email received from at least one of specific email addresses and Internet domains are excluded from scanning.

Claim 8 (Original). The computer-implemented process of claim 1 wherein analyzing and extracting contact information from items within data store comprises:

- locating at least one of email addresses and contact information in the items;
- copying the information to a temporary storage;
- formatting the information; and
- providing the information for possible inclusion in the list.

Claim 9 (Original). The computer-implemented process of claim 1 wherein adding the contact information to the dynamic list comprises adding the contact information to the list if the information has a weight of at least one of equal and greater than contact information already in the list.

Claim 10 (Original). The computer-implemented process of claim 9 wherein information is not added to the list if it is already stored in the list.

Claim 11 (Original). The computer-implemented process of claim 9 wherein information is not added to the list if it is already stored in an address book.

Claim 12 (Original). The computer-implemented process of claim 9 wherein contact information already in the list is updated by matching contact information extracted from the data store.

Claim 13 (Original). The computer-implemented process of claim 1 wherein new contact information is added to the list as new information enters the data store.

Claim 14 (Original). The computer-implemented process of claim 1 wherein entries are dynamically weighted on the number of times that the entries have been used, and how recently the entries have been used.

Claim 15 (Original). The computer-implemented process of claim 1 wherein the size of the list is constrained.

Claim 16 (Original). The computer-implemented process of claim 1 wherein the size of the list is variable.

Claim 17 (Original). The computer-implemented process of claim 15 wherein entries are weighted and wherein entries having greater weights replace entries having equal or lower weights if the list is full.

Claim 18 (Original). The computer-implemented process of claim 1 wherein new entries are automatically added to the list after those entries are first used.

Claim 19 (Original). The computer-implemented process of claim 1 wherein entries are automatically removed from the list if they are added to an address book.

Claim 20 (Previously Presented). The computer-implemented process of claim 1 wherein the user interface provides the capability to browse the list.

Claim 21 (Previously Presented). The computer-implemented process of claim 1 wherein entries from the list are selectively added to an address book via the user interface.

Claim 22 (Original). The computer-implemented process of claim 1 further comprising automatically suggesting to a user that specific entries from the list be added to at least one of an address book and contact database via the user interface.

Claim 23 (Currently Amended). A display device having rendered thereon dynamically changing results of a resolution list, comprising:

- a set of entries derived by dynamically tracking a data store and analyzing and extracting contact information from the contents of items within the data store, the items within the data store comprising a plurality of electronic documents including one or more of word processor files, spreadsheet files, and presentation files;

- a set of results dynamically generated from the contact information and related to user data entry; and

- at least one dynamic output providing the results in real time as the user enters the data.

Claim 24 (Original). The display device of claim 23, further comprising at least one selectable interface option displayed on the client to enable selection of a result in the resolution list in real time.

Claim 25 (Previously Presented). The display device of claim 23 wherein the data store further includes at least one of:

- previously sent and received email;
- email addresses and contacts that exist within previous systems;
- email stores located on at least one of local and public servers;
- current and previous contact databases; and
- data embedded within other electronic application files.

Claim 26 (Original). The display device of claim 23 wherein the dynamically generated results comprises providing a most probable match from the entries to a portion of the user entry data.

Claim 27 (Original). The display device of claim 23 wherein analyzing and extracting contact information from items within data store comprises:

- locating at least one of email addresses and contact information in the items;
- copying the information to a temporary storage;
- formatting the information; and
- providing the information for possible inclusion in the list.

Claim 28 (Original). The display device of claim 23 further comprising an interface option that automatically suggests to a user that specific entries be added to at least one of an address book and contact database.

Claim 29 (Currently Amended). A user interface for providing automatically generated completion information from entries in a dynamic list to a user, comprising:

- an extract module that analyzes and extracts contact information from the contents of items within a data store to dynamically track entries, said items within the data store comprising a plurality of electronic documents including one or more of word processor files, spreadsheet files, and presentation files;

- a suggest module capable of generating suggested entries from the contact information that is related to entry data of the user; and

a menu that displays the suggested entries in the dynamic list in real time as the user enters the data.

Claim 30 (Previously Presented). The user interface of claim 29 wherein the data store further includes at least one of:

- previously sent and received email;
- email addresses and contacts that exist within previous systems;
- email stores located on at least one of local and public servers;
- current and previous contact databases; and
- data embedded within other electronic application files.

Claim 31 (Original). The user interface of claim 29 wherein the automatically generated completion information comprises providing a most probable match from the list to a portion of the user entry data.

Claim 32 (Original). The user interface of claim 29, wherein the menu is a pop-up menu that appears in close proximity to an area where the user enters the data.
